According to our Recruitment Strategy, we'll hire mostly software developers. However, people have many talents / interests / skills. See also: WikiSuite Vision

Please see:

- https://en.wikipedia.org/wiki/Ikigai

So in user profiles, we want to know what people's interests are, so we can align with future opportunities. As an example: TeamDRC has a very high ratio of developers who are also graphic designers. This was unexpected and a totally nice surprise. Thus, we have increased our outlook for this type of project because we have the skills, the interest, it will make the projects better and the clients

happy!

Here is a nice overview of interests beyond coding. I want to know more about your interests and skills beyond your studies. We could have projects in the future for these talents. For example, I'd like us to make short videos and animations / explainer videos. And thus, interests in comedy, acting, videos, etc. will be most useful. I look forward to learning more about you all!

Please indicate your Interests in tiki.org teams and EvoluData departments

I suspect we'll see a lot of the following:
