

This page should merge with [Video Editor](#)

New: https://developer.mozilla.org/en-US/docs/Web/API/Screen_Capture_API/Using_Screen_Capture

Executive summary

- Replace <https://doc.tiki.org/Screencast> because jCapture is a Java applet
 - <http://www.cso.com.au/article/592951/oracle-says-goodbye-java-browser-plugin-jdk-9/>
- Replicate Spark's screen capture and share
- A candidate for H5P

We need

- Capture audio and video (annotation of videos would be a huge bonus, but not needed at first)
- Capture screenshot and draw on it
- Capture HTML (web clipper)
- Upload to Tiki
 - In a wiki page / test area
 - As a tracker field
- Capture webcam (nice to have)
- <https://dev.tiki.org/Collaborative-Image-manipulation> (crop, annotate, blur, etc.)

Use cases

- QA on theme integration: Isabelle takes a screenshot and annotates and draws on it for luci
- Documentation

Avenues

- Use same method as Openfire Meetings
- Drawings: SVG-edit in Tiki or the [drawing apps in Openfire Meetings](#)
