Task

Comments UX + Notifications Revamp: username mentions pill button styling (to show avatars, reveal interactivity, etc.)

Add a timesheet

**Add a timesheet for this task**

Description

GitHub, GitLab, and social media websites allow @ mentioning people, but when they recognize/validate the user mention they simply represent it as a hyperlink. It could be nice to use a "pill" button styling instead, as:

- It adds an extra human element when you can have a tiny version of the user's avatar/photo shown next to their name
- The display name could be shown on render (instead of the username)
- The button-shaped background/border/etc. communicates a design "affordance" to the user, letting them know that it is an interactive clickable widget, especially for hover cards for example.

See attached screenshot for an example of how Fractal represents username mentions as pill

buttons containing the avatar and display name.

#### Related

- 5 Nice to have: Users and groups profile cards (with avatars, timezone/location/availability, and other metadata) in tracker item fields, wiki pages signatures, comments UX, user-mention autocompletion, etc. assigned to developer
- 2 Must: Comments UX + Notifications Revamp: Group / Username mentions (with autocompletion) feature should be a hard dependency built-in to the core, not a plugin assigned to developer
