

AFTER A TIKI MANAGER CLONE, WITH ELASTICSEARCH INDEX PREFIX IN TIKI.INI, THERE IS A MISMATCH WITH ELASTICSEARCH CURRENT INDEX THAT CAN CAUSE 2 TIKIS TO WRITE TO ONE INDEX

Status

🟡 Pending

Priority

5 Nice to have

Task

After a Tiki Manager clone, with Elasticsearch index prefix in tiki.ini, there is a mismatch with Elasticsearch current index that can cause 2 Tikis to write to one index

Add a timesheet

Add a timesheet for this task

Description

If there is a mismatch here, there should be options:

- Fail (for sure), and fall-back to MySQL index if activated
- explore if there could be a read-only mode, and warning
 - To admin: you need to rebuild

- To user: data might not be accurate

or something like this 😊

Comments

Maybe this will be solved in another task?
