Comments

Someone commenting on the problem of wikis vs git
MRs workflows

Jeff Fortin T. 2023-08-09 13:16

Another interpretation of the problem in <https://duckalignment.academy/wiki-or-git/>
:

> A wiki is more accessible, which helps get more people involved, but the workflow is worse. It's not that "a git-based workflow is more familiar to developers", it's that the editorial workflow is bad on a wiki.

>

> In a wiki, either people can edit the page or they can't. This leads to one of two opposite outcomes: 1. they make big edits without talking to anyone which makes relying on the wiki for authoritative info risky. 2. people are afraid to make minor edits because they don't want to break anything.

>

> git-based docs allow anyone* to submit a proposal by way of a pull request. Then the trusted contributors can work with them to refine it if needed. It also allows trusted contributors to make a proposal for broader comment. This workflow improves the overall collaboration in the project's documentation, even though it comes with a steeper learning curve.

>

> Spam negates the wiki's lower barrier to entry anyway. Any website that allows content submission will be a target for spam. A well-known project's wiki is a particularly attractive target. This means you have to put barriers in place to prevent (at least some) vandalism.

Wiki with moderation
