Description

Credentials: [item59542-manager-cypht-dev1-evoludata-com](#)

This is the process:

<https://dev.tiki.org/How-to-upgrade-Cypht-within-Tiki-via-Composer>

I tried on trunk.cypht.dev1.evoludata.com

```
cyphthdev@dev1:~/domains/trunk.cypht.dev1.evoludata.com/public_html$  
./temp/composer.phar update --prefer-dist --working-dir="vendor_bundled" --no-dev  
Gathering patches from patch file.  
> Tiki\Composer\RestoreVendors::restore  
> Tiki\Composer\ThemeInstaller::setup  
> Tiki\Composer\CleanVendorAfterVendorBundledMigration::cleanLinks  
Loading composer repositories with package information  
Info from https://repo.packagist.org: #StandWithUkraine  
Updating dependencies  
Your requirements could not be resolved to an installable set of packages.
```

Problem 1

- Root composer.json requires jason-munro/cypht dev-master -> satisfiable by jason-munro/cypht[dev-master].
- jason-munro/cypht dev-master requires henrique-borba/php-sieve-manager dev-master -> found henrique-borba/php-sieve-manager[dev-master] but it does not match your minimum-stability.

Running update with --no-dev does not mean require-dev is ignored, it just means the packages will not be installed. If dev requirements are blocking the update you have to resolve those problems.

```
cyphthdev@dev1:~/domains/trunk.cypht.dev1.evoludata.com/public_html$
```

Comments

@Going to work on this
elvis.ansima 2022-08-12 20:51

As it is on the emergency priority i am going to provide a feedback within 2days.
Thank you

@Confirmed
elvis.ansima 2022-08-13 07:56

I confirm that the problem exists! running composer update
brought me the same error!

@Merge Request
elvis.ansima 2022-08-13 09:40

I have found a fix

https://gitlab.com/tikiwiki/tiki/-/merge_requests/1692

Maybe
[Marc Laporte](#) 2022-08-13 14:47

master should be at minimum-stability = dev

And when we create a new branch, we switch to stable

@Marc

elvis.ansima 2022-08-14 01:18

I got it.

What about the other dependencies?

To void unexpected behavior should i commit the lock file too?

@Elvis

Marc Laporte 2022-08-14 09:17

Yes, commit the lock file

@Elvis: wait. I was mistaken

Marc Laporte 2022-08-14
16:03

We have to keep "minimum-stability":
"stable" because "minimum-stability":
"dev", will do

```
- Upgrading amphp/amp (v2.6.2 =>
dev-master 9d5100c)
  - Upgrading amphp/byte-stream
(v1.8.1 => dev-master 18f86b6)
    - Upgrading bower-
asset/fontawesome (5.15.4 =>
5.x-dev afecf2a)
      - Upgrading bower-
asset/swfobject (2.2 => 2.3-
beta1)
        - Upgrading ckeditor/ckeditor
(4.19.1 => 4.19.x-dev f6a3be3)
          - Upgrading clue/stream-filter
(v1.6.0 => 1.x-dev 3cd5ac5)
```

I asked for help

Fortunately our earlier discussion brought me to learn more about composer stuffs, and once again thanks to Victor

Is it because

<https://packagist.org/packages/henrique-borba/php-sieve-manager> doesn't have a release yet?

Marc Laporte 2022-08-14 15:10

<https://packagist.org/packages/henrique-borba/php-sieve-manager>

Fixed

victor.emanouilov 2022-08-15 10:21

<https://gitlab.com/tikiwiki/tiki/-/commit/5a2399a1ca00a2a7994ffa03134dae7e1c132053>

php-sieve-manager had minimum stability dev and we required stable. We needed to explicitly require the dev-master version in our composer.json to allow composer use and resolve it as a cyphr requirement.

@Victor

elvis.ansima 2022-08-15 11:06

Thank you so much for the fix ☺
