5 Nice to have

Task

When clicking a button widget such as the Save button, pending open widgets (such as multiple-choices dropdowns) should not block it?

Add a timesheet

Add a timesheet for this task

Description

If you open a task/ticket here for example, and autocomplete or pick/click an item in the "Job", "Assigned to", "Assigned by" or "Keep informed" fields, and then want to click "Save" directly after setting one of those fields last, the Save button doesn't work directly, you need to click it once for the above fields to be de-activated, and then a second time for the Save action to actually be triggered. That doesn't really feel normal.

Comments

Maybe just a transient glitch

Jeff Fortin T. 2022-08-15 10:34

Interestingly, I've tried it again and it worked without triggering the bug. So maybe I am just using the mouse wrong. Closing as unable to reproduce for now (unless someone else is also seeing this).
