Task

Interactive live diffing and revisions comparison time slider tool (like in WordPress)

Add a timesheet

[Add a timesheet for this task](#)

Description

Not sure how hard or easy this is, but basically, I want the equivalent of the WordPress revisions comparison time slider: <https://youtu.be/2CCXRmWiADo?t=39>

Instead of submitting a history radiobuttons-based form each time to find/bisect the source of the changes that interest you through trial-and-error, you can just slide the start/end sliders with the "Compare any two revisions" feature, and it shows you the diff "live". A faster and much more pleasant UX, that could potentially go hand-in-hand with the recent changes "freshness indicator" of a page triggering the timeline view (like Google Documents does, to a certain extent; it does have live preview of the various versions).

Related

- 5 Nice to have: Comments UX + notifications revamp: Content freshness indicator, new changes and live server changes notifications; systematically show "Last modified by \$user \$human_readable_time_delta" on wiki pages (like in Google Docs), and alert the reader if a page has been modified (offering to refresh) assigned to designer, developer
