Task

Check with Virtualmin 7.2.1: pm.max_spare_servers vs pm.max_children

Add a timesheet

[Add a timesheet for this task](#)

Description

Once <https://github.com/virtualmin/virtualmin-gpl/pull/461> is in the packaging system, proceed to 4 test installs:

- small machine Virtualmin
- small machine WikiSuite
- big machine Virtualmin
- big machine WikiSuite

(Could be VMs paid by the hour)

And compare:

pm.max_spare_servers

pm.max_children

We want to see if server size has an influence, and if the WikiSuite installer overrides anything it shouldn't.
