Description
Gary and Bernard reported issues in the community chat room

Good idea to test with Laragon which Gary uses.

@bruno.kambere I see you use Laragon here https://gitlab.com/tikiwiki/tiki/-/merge_requests/2784 so picked you 😃

Tiki installer with trunk and PHP 8.1
bruno.kambere 2023-05-21 08:34

I've tested the Tiki installer with Trunk and PHP 8.1.19 During the installation process, I've not faced any problems.
Here are my environment specifications:

Operating system
OS : Windows 10 Pro
System type : 64-bit operating system, x64-based processor
Processor: Intel(R) Core(TM) i5-4300U CPU @ 1.90GHz 2.50 GHz

Local server
Laragon 5.0.0.0
Php version : 8.1.19
Appache Version: Apache/2.4.47 (Win64) OpenSSL/1.1.1t PHP/8.1.19

Composer version 2.5.5

Note: I started the process from zero (cloning the project) and I created a new database.

Tiki installer with trunk and PHP 8.2
bruno.kambere 2023-05-21 08:58

I've tested the Tiki installer with Trunk and PHP 8.2.6. When executing sh setup.sh command, I had a warning that told me to enable PHP's zip extension before moving forward. Here below is the message :

Problem 1
- Root composer.json requires PHP extension ext-zip * but it is missing from your system. Install or enable PHP's zip extension

To resolve this warning, I went to my laragon php directory :
C:\laragon\bin\php\php-8.2.6-Win32-vs16-x64\php.ini and enabled zip extension.

The second issue was warning messages above all forms during installation. Here
are warning messages:
