Comments

Solved
Marc Laporte 2023-07-06 11:54

I don't know how it was solved.

Maybe this? item93762-https-25xdev-tiki-org-DevMenu-vs-https-dev-tiki-org-26x

The problem is not solved, but rather intermittent
Marc Laporte 2023-07-10 01:51

_____

Is luci around?
gary.cunningham-lee 2023-07-11 09:26

He's the one who originally set this up, isn't he? Or would he not have any clues about the current situation?

I tried
Marc Laporte 2023-07-13 13:05

I reached out to him via Telegram on 2023-06-21, to no avail.

Intermittency
Marc Laporte 2023-07-13 13:04

Strangely, I have found that sometimes, it's OK, sometimes, not. I don't know the pattern.

Feedback
adrien.maloba 2023-07-19 20:18

The issue arises because the text "Copy to clipboard" is included in the CSS file used by *.tiki.org sites. This text comes from the PluginCode used to add CSS rules to the https://themes.tiki.org/Tiki_org_family_customizations_CSS page by calling it via https://themes.tiki.org/tiki-index_raw.php?page=Tiki_org_family_customizations_CSS &clean&textonly&download&css.

The presence of this text then impacts one of the attributes not recognized by the rule definition.

I then made a small modification to the https://themes.tiki.org/Tiki_org_family_customizations_CSS page to ensure that the attribute was not affected.

With this modification, the problem is solved. Do I need to investigate the code further to prevent the PluginCode "Copy to clipboard" text from being inserted into

the CSS file when it's called?

Just solve the immediate problem

No need to improve Tiki code because this is really a one-time hack.

I am planning for Victor to improve Tiki's federation features so Tiki instances can share data in a clean way.
